Objective

Motivated Software engineer with hands-on experience in full-stack web development using Python, NestJS, ReactJS. Ready to put my work and skills to work in a company where I can contribute to building scalable backend systems and RESTful APIs while continuing to grow as a developer.

Education

Velagapudi Ramakrishna Siddhartha Engineering College CGPA: 8.60
Bachelor of Technology in Information Technology *Nov. 2022 – Apr. 2026*

Skills

Programming Languages: C++, Python, Java
Frameworks: ReactJS, NestJS, NodeJS, FastAPI
Database Systems: PostgreSQL
Development Tools & Technologies: Visual Studio Code, Git, Postman, Android Studio

Experience

Graduate Engineer Trainee April 2026 - Present
AKSI Aerospace

- **Tech stack:** NestJS, React, PostgreSQL, FstAPI, Redis
- Working on realtime projects for KhetPilot and RoboClave teams to achieve experience and develop along with experienced professionals.
- Working on backend and database by developing new projects and working on existing ones to actively produce new products.

Projects

KhetPilot | *ReactJS, NestJS, Flutter* June 2026

- Developed three products for KhetPilot team - Kisan Shakti(Farmer APP), Pilot App and Admin, Hub Manager website for the farmers who wants to book their services for drone spraying.
- Used PostgreSQL as the database, React for the frontend, NestJS for the backend, and TypeORM for migrations.
- Worked as a core backend developer in the team and frequntly switched roles per situations for some frontend issues as well.

AdaptiveHire | *ReactJS, NestJS, PostgreSQL, Redis* July 2026

- An exam platform for hiring candidates through assessments by assessing the behavior of the candidates and their personality traits.
- Working as lead developer adding several features. Reports generated after candidates finish their assessment which gets behavioral profile like leadership - x percentage, adaptability - x percentage so on.

Forecasting Tomato and Onion Prices using Hybrid Ensemble Models | *Python* July 2025 – Nov. 2025

- *Deep Learning*
- Predicts the prices of tomatoes and onions for upcoming days using previous years' datasets and weather forecast conditions.
- Initially applied models like Seasonal Autoregressive Integrated Moving Average (SARIMA) and Long Short Term Memory (LSTM) for tomato price prediction.
- Later added Prophet and XGBoost ensemble as an extension to capture festival effects and sudden price shocks in onion prices, and made predictions for both tomatoes and onions.

Certifications

AWS Certified Cloud Practitioner | *AWS* Aug. 2025
DBMS and MySQL Course Certification | *Udemy* May 2024
Programming Essentials in C++ | *CISCO* Aug. 2023

Achievements and Co-curricular Activities

- Participated in coding contests in national-level tech competitions in AFOSEC at VR Siddhartha Engineering College.
- Organized events for IT students focused on building technical and programming skills.
